

P2 Tobin Insight

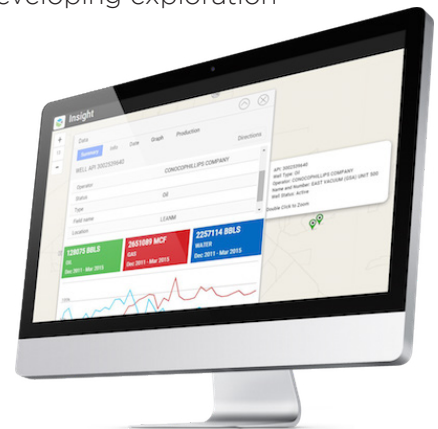

Tobin Insight For Exploration & Production

Tobin Insight helps E&P companies make sense of the data-thick, high-speed oil and gas landscape. The application gives you the ability to access the market metrics – permit, rig, and operator data – you need to make quick, well-informed decisions for your business. It also gives you key insight into how the wells are performing in your areas of interest. With Tobin Insight, developing exploration and partnership plans has never been easier.

View Key Market Metrics For Better And Faster Decision-Making

Tobin Insight holds the information you need to perform competitive analysis and make strategic decisions. View market metrics – information on permits, rigs, operators, and more – by geography and prepare your next move. The application’s “Top 10” dashboards provide a snapshot of who the biggest players are by county and play, allowing you to more effectively develop partnerships and exploration strategies.

See How The Wells In Your Areas Of Interest Are Performing

There isn’t a single operator out there that doesn’t want to learn everything there is to know about the production information in their areas of interest. Use Tobin Insight to get a detailed look at how the wells are performing where you’re currently operating or where you’re thinking about moving next. Filter by operator or region to quickly pull up exactly what you need.

Create Custom Reports For Your Unique Business Requirements

Data stored in a cloud application is all well and good, but it doesn’t mean much if you can’t make effective use of it. With Tobin Insight, create custom, easy-to-understand reports and export to Excel to manipulate for your specific business requirements.

Tobin Insight is **powered by Google Maps**, giving you a familiar and easy-to-use mapping framework for consuming data and executing your plans.

3,000,000+

Tobin Insight tracks petroleum production, drilling permits, and other key data for more than **3 million North American oil and gas wells**.

Because the application is **cloud-based**, you’ll never have to worry about internal server capacity or network slowdown issues.
