

P2[®] Health Check

IDEAS

An IDEAS Health Check is a consulting engagement that focuses on how to get the best from your IDEAS software. It is designed to ensure your processes and software are aligned and effective, but most importantly identifies areas where you can drive additional benefits.

The IDEAS oil and gas accounting system was specifically developed to accommodate the unique requirements of multi-national oil and gas operators. It is a powerful platform that combines core hydrocarbon accounting functionality with industry-specific modules such as materials management and has been developed in conjunction with the world's most successful oil and gas companies.

Identify. Optimize. Perform.

The P2 IDEAS Health Check recognises that the road to customer success is an on-going journey and is designed to ensure that our customers are returned best value from their investment and that they obtain the much needed Return On Investment. Experience with customers around the world has shown that over time and with changes to staff and practices, the original benefits enjoyed by our customers may sometimes diminish. However these benefits can be restored and revitalised by checking the effectiveness of the system configuration and parameters.

Once a P2 Healthcheck has been performed, you will receive a comprehensive report that details the findings, highlighting the areas of software that are not being used to their full advantage and will recommend how to get the optimum potential out of the powerful IDEAS platform.

Health Checks typically include:

- Systems and settings check up.
 - Financial management process review.
 - Alignment of internal system controls with internal controls.
 - Effectiveness of management reports being produced.
 - Recommended system modifications and updates.
