P2 GIS

P2 GIS Business Layers: A Better View Of Your Company's Assets

Get a clear, real-time view of your company's land assets - Leases, Wells, Contracts, etc. - all in an electronic, easy-to-use map. Now anyone on your team can refer to a single map to perform in-depth analysis and gain quick, accurate answers to their most important questions without having to worry about the timeliness of the data. Maps and Land data are no longer disconnected with P2 GIS.

Business Layers That Keep All Of Your Information In Sync

Every type of Agreement entered into P2 Land can come to life on a P2 GIS map. Users can query and open all files from the map, making data review and analysis simpler. Maintain one version of your tract with polygons that will always be in sync with P2 Land.

Analyze Land Attributes By GIS Location

Enhance your analysis potential using maps instead of spreadsheets. P2 GIS Analysis Layers simplify and summarize such attributes as Mineral and Working Interest, Acreage and NRI by spatial location. Use them to better understand your company holdings by geography where many leases overlap.

For Example: See What Your NRI Is For Any Given Area

The Interest Aggregate Layer rolls up all of your layers by common spatial location into one shape. You can quickly see what your company's interest is in every area. Need to validate the information in your land system? Here's the answer.

Quickly Analyze Provisions, Depth Severances And More

The Related Layer gives you visual insight into important business information, including provisions, working interest partners, depth severances and more. Rather than gleaning this kind of information from stacks of paper, use the map to see it all in one place.
