More Than Field Data Capture On A Tablet

P2 Field Operator combines P2’s industry-leading field data capture and operations management software with mobile capabilities to simplify field operators’ daily challenges of managing large portfolios of wells and equipment, and remote operations. The solution enables quick data validation, image capture, and seamless collaboration between the field and back office.

By bridging the gap between the field and back office and connecting all the key stakeholders, P2 Field Operator allows operators to reduce deferments and improve operational efficiencies by identifying and reporting production problems faster. In fact, studies show that with P2 Field Operator, time spent on field data capture and reporting activities can be reduced by 40% or more.

Operators enjoy the solution’s simple navigation, interactive route-facility and stop-battery totals, easy-to-interpret graphs, and color-coded variances – all integrated with industry-standard calculations. P2 Field Operator also features seamless data capture, liquid inventory and run ticket management, automation/SCADA integration, quick access to transactions like well tests and run tickets from anywhere in the system, and fast and secure data synchronization.

Why P2 Field Operator?

• Centralize commentary across assets and transactions
• Eliminate management of paper run tickets
• Leverage your investments in automation and SCADA
• Fast adoption
• Low cost of ownership
• Reliable in low-bandwidth areas
• Supported by people who understand field operations
Pumping By Exception Made Possible

Pumping by exception requires surveillance by exception. When combined with P2’s Operational Intelligence capabilities, P2 Field Operator gives operators the insights needed to prioritize tasks and routes – in other words, to pump by exception. For example, if two wells are down at the same time, pumpers can quickly decide which one to attend to first based on surveillance rules that monitor the collected data and initiate alerts. Operators can then deviate from the prescribed route if need be and focus on the wells that need more urgent attention.

An Industry Tradition

P2 Field Operator was created by the same team that developed P2 eVIN, which is trusted by more than 20,000 field operators around the world. Built on the same foundation as the industry-leading P2 Merrick production solution for hydrocarbon accounting and reporting, P2 Field Operator is designed to meet field operation needs anywhere in the world – onshore and offshore, in unconventional plays as well as conventional ones.

P2 Field Operator was created by the same team that developed P2 eVIN, which is trusted by more than 20,000 field operators around the world.
