

For oil and gas companies, accurate production data is the foundation of every operational decision.

### PRODUCTION SCENARIO:

- 1 RISK**  
Avoid potential loss of lease with early detection and communication of shut-in or down wells with a workflow.
- 2 UNDER-PERFORMANCE**  
Run well diagnostics for intervention options when production is below a forecasted target.
- 3 INVENTORY**  
Manage production inventory so the supply can get to market in the most efficient way possible.
- 4 ALLOCATIONS**  
Ensure accurate hydrocarbon allocations that ultimately drive revenue payments and royalty distributions.

With accurate, up-to-date production data for each well and tight integration between land, accounting and production, oil and gas companies achieve leaner, faster, fully-connected operations and increased profit margins.

**ACCURATE FIELD DATA** is the foundation for accurate allocations.

**ACCURATE HYDROCARBON ACCOUNTING DATA** ensures revenue, forecasts, and royalties are all accurate and reliable.

**PRECISE OPERATIONAL DATA** ensures the right assets are getting attention at the right time.

**ROBUST ANALYTICS** support data-driven operational marketing and financial decisions.

**STRONG COLLABORATION** enables cross-discipline decision making from the field to the back office, on up to the executive level.

EMPOWERING THE PEOPLE WHO POWER THE WORLD
